

Timber prices rising? DUO keeps you safely on the ground.

Remain unaffected by global timber market trends.

With our polymer-based DUO System Formwork, neither high timber prices nor long delivery times get in the way of your construction project. In addition, the particularly lightweight polymer panels with a maximum individual weight of only 25 kg offer high stability and load-bearing capacity. You too can benefit from the advantages of DUO as wall and slab formwork for your next project!
